1. **What can I do with an Allied Health Science Degree?**
   Courses in the AHS Program include general education with a strong concentration in the sciences. Most AHS graduates apply to four-year colleges/universities to pursue a major in a specific health related field. Graduates can also apply for entry-level jobs where a health care background provides a competitive edge.

2. **Can I get help finding a four-year college / university to transfer into once I complete my AHS degree?**
   Harcum students have access to the Department of Career and Transfer Services: [http://harcum.edu/s/1044/edu/majors.aspx?sid=1044&gid=1&pgid=1011](http://harcum.edu/s/1044/edu/majors.aspx?sid=1044&gid=1&pgid=1011) to guide them in the selection and application to a four-year college/university.

3. **I was accepted into one of the AHS track programs, what does this mean?**
   Students who have not completed the prerequisites required for their program of choice, or who need to strengthen their academic skills, may be accepted into the Allied Health Science Program transfer track pertaining to their desired major. Once pre-requisites are completed, students can apply to their major of choice.

4. **When do I apply for my major of choice?**
   Students who are in their final semester of completing pre-requisites for their major of choice need to contact the admissions counselor for their specific major at the beginning of the semester. The Allied Health Program advisor will guide students in this process.

5. **How do I know if I will be accepted into my major of choice?**
   Students enrolled in the AHS transfer track should maintain a grade of B or higher in all courses to remain competitive with other applicants. Your AHS advisor will monitor your progress throughout the AHS program.
